Visual teaching that
makes sense →

For Students 🧑

Material they can explore

- › They rotate, zoom, and dissect 3D models.
- › They better understand relationships between parts.
- › They work with the model independently and at their own pace.

For Schools 🏫

Modern teaching without
complicated setup

- › Corinth works in browsers on common school devices.
- › Accounts, classes, and access can be managed directly in the app.
- › Content and features are continuously updated.

For Teachers 👩

Less complicated explanations,
more understanding

- › They demonstrate lessons clearly with interactive models.
- › They use CoriAI smart assistance during preparation.
- › Models are easily shared via link or QR code.

Corinth helps teachers clearly
explain complex topics and
allows students to truly explore
the material.

Discover lesson in depth

More than 1,600 professionally verified 3D models allow you to show phenomena and structures that are difficult to explain with textbooks alone.

Dissectible Models

Look inside. Gradually reveal layers, separate individual parts, and show their relationships. Students can progress from the whole to the smallest detail.

- › Revealing individual layers.
- › Separate display of selected parts.
- › Clear explanation of complex structures.
- › Active exploration directly by students.

AR / VR

Bring models into augmented or virtual reality and give students a new perspective on the material.

From Question to Understanding

Why don't pigeons have teeth?

Air sacs? Where are they?

1.

Choose a Topic

Search for a suitable 3D model by subject, topic, or curriculum.

3.

Show the Lesson Visually

Rotate, zoom, disassemble, and display individual parts of the model directly during your explanation.

2.

Consult with CoriAI

Use CoriAI as a smart guide for expert content and inspiration when preparing lessons.

4.

Engage the Whole Class

Share the model via QR code or link. Students have the model in front of them and can explore it at their own pace. This turns teaching from passive watching into active discovery.

Corinth connects expert 3D content, an AI voice guide, and easy sharing. This allows teachers to quickly prepare a clear activity for the entire class.

Corinth works in browsers on computers, tablets, mobile devices, touchscreens, and interactive whiteboards.

Support and Development for Educators

Technology should help teachers, not add extra work. That's why with the app you get inspiration, practical materials, and support for everyday teaching.

Professional Development for Teachers

Learn to use 3D models, AI, and other digital tools in teaching. Selected trainings conclude with a professional development certificate.

Webinars and Training

Learn to use 3D models and other modern tools to truly support educational goals.

Methodologies and Inspiration

Use prepared methodological materials, practical examples, video tutorials, and specific teaching tips.

Teacher Community

Share experiences, get inspired by proven methods, and draw ideas from colleagues in the field.

Funding Options

The OP JAK challenge "Consulting with AI" supports the safe and meaningful introduction of AI into schools.

License Type	Duration	Price
Teacher	1 year	\$179.00
	5 years	\$590.00
School	1 year	\$1,400.00
	5 years	\$5,900.00

The price list is valid starting in 2026, excluding VAT.

Schedule a short demo. We will introduce the app and together select the right solution.
